Preface	iii
1. Executive Summary	1
1.1 General	1
1.2 Recommendations	3
2. General Information	10
2.1 Scope and Applicability of this Report	10
2.2 Procedures	11
2.2.1 Definition of a Fluoroscopically-Guided Interventional Procedure	11
2.2.2 Types of Procedures	11
2.2.3 Temporal Trends	14
2.2.4 Individuals Performing Interventional Procedures (interventionalists)	16
2.3 Efficacy, Effectiveness, Benefit-Cost Analyses	17
2.3.1 Diagnostic Procedures	17
2.3.2 Therapeutic Procedures	18
2.4 Justification, Appropriateness, and Benefit-Risk Analyses	18
2.4.1 Patient Benefit-Risk Analysis Models	19
2.4.1.1 Diagnostic Studies	19
2.4.1.1.1 Benefit	19
2.4.1.1.2 Procedure Risk	20
2.4.1.1.3 Radiation Risk	20
2.4.1.2 Therapeutic Procedures	20
2.4.1.2.1 Benefit	20
2.4.1.2.2 Procedure Risk	21
2.4.1.2.3 Radiation Risk	21
2.4.2 Applying Benefit-Risk Analyses	23
2.4.3 Risks to Interventionalists and Staff	25
2.4.3.1 Radiation Risk	25
2.4.3.2 Medical Risks	26
2.4.3.2.1 Ergonomic Risks to Interventionalists	26
2.4.3.2.2 Economic Benefit to Operator and Staff	27
2.4.4 Benefit to Society	27
2.4.5 Discussion	28
2.5 Physics and Dosimetry	29

2.6	Radiation Health Effects	33
2.6.1	Demographic Factors	33
2.6.2	Medical History Factors	34
2.6.3	Cancer Risks	35
2.6.3.1	Worker Cancer Risk	37
2.6.3.2	Patient Cancer Risk	37
2.6.3.3	Stochastic Risk-Related Aspects of Dosimetry	38
2.6.4	Deterministic Effects	41
2.6.4.1	Tissue Reactions: Skin and Hair	43
2.6.4.2	Tissue Reactions: Lens of the Eye	44
2.6.5	In Utero Irradiation	49
2.6.6	Heritable Effects	50
3.	Fluoroscopy Equipment and Facilities	51
3.1	Equipments	53
3.1.1	General Considerations	53
3.1.2	Specific Equipment Components	58
3.1.3	Specific Equipment Components for Pediatric Procedures	60
3.2	Room Design and Structural Radiation Protection	61
4.	Protection of the Patient	67
4.1	Patient Dose Review	67
4.1.1	Cardiac Procedures	69
4.1.2	Other Interventional Procedures	70
4.1.3	Pediatric Interventional Procedures	74
4.2	Patient Radiation Dose-Management Program	86
4.2.1	Radiation History	86
4.2.2	Pregnancy	86
4.2.3	Type of Procedure	87
4.2.4	General Principles of Radiation Dose Management	88
4.2.4.1	Patient Dose Monitoring	89
4.2.4.2	Optimizing Patient Dose	90
4.2.4.3	Managing Peak Skin Dose	93
4.3	Sample Patient Radiation Dose-Management Process	94
4.3.1	Preprocedure Planning	94
4.3.2	Fluoroscopic Set-Up and Configuration	94
4.3.3	Intraprocedural Management	95
4.3.3.1	Radiation Dose Management	96
4.3.3.2	Monitoring Patient Radiation Dose	97
4.3.3.3	Use of Radiation-Level Information During the Procedure	99
4.3.4	Post-Procedure Management	99

4.3.4.1	Dose Documentation	99
4.3.4.2	Substantial Radiation Dose Level	101
4.3.4.3	Interventionalist Responsibilities	103
4.3.4.4	Patient Follow-Up	104
4.3.5	Radiation Dose-Management Processes	105
4.3.5.1	Diagnostic Radiography and Diagnostic Reference Levels	106
4.3.5.2	Fluoroscopy-Guided Interventional Procedures and Advisory Data	107
4.3.5.3	Example of Using an Advisory Data Set to Evaluate a Facility	108
4.3.5.4	Further Research and Data Collection	114
5.	Protection of Staff	115
5.1	Review of Staff Exposure	116
5.2	Essential Radiation Protection Knowledge	116
5.3	Pregnant or Potentially-Pregnant Workers	117
5.4	Radiation Sources	120
5.5	Personal Radiation Protective Equipment	125
5.5.1	Lead and Other Attenuating Materials (lead-equivalent thickness)	125
5.5.2	Protective Garments	126
5.5.3	Thyroid Shields	128
5.5.4	Protective Glasses	128
5.5.5	Protective Gloves	130
5.5.6	Movable Shielding	131
5.6	Situational Awareness	133
5.7	Personal Monitoring and Risk Assessment	134
5.7.1	Occupational Dose Limits	134
5.7.2	Dose-Monitoring Policy Considerations	137
5.7.3	Operational Dose Monitoring	138
5.7.4	Investigation of Personal-Dosimeter Readings	142
5.7.5	Investigation of High Occupational Dose	144
6.	Administrative and Regulatory Considerations	146
6.1	Human Resources	148
6.1.1	Principals (physicians and other authorized independent operators)	148
6.1.2	Routine Direct-Support Staff	148
6.1.3	Occasional Direct-Support Staff	148
6.1.4	Indirect-Support Staff	149
6.1.5	General-Support Staff	149
6.1.6	Administrative and Management Staff	149
6.1.7	Visitors to the Procedure Room	149

6.2	Education and Training	152
6.2.1	Physicians and Other Authorized Independent Operators	152
6.2.2	Routine and Occasional Direct-Support Staff ..	154
6.2.3	Indirect-Support Staff	156
6.2.4	General-Support Staff	156
6.2.5	Administrative and Management Staff	157
6.2.6	Visitors	157
6.3	Radiation Safety Credentials and Clinical Privileges ..	157
6.3.1	Physicians and Other Independent Operators (interventionalists)	157
6.3.2	Routine Direct-Support Staff	158
6.3.3	Medical Physicists, Medical Health Physicists, Radiation Safety Officers	158
6.4	Purchase, Configuration, and Technical Quality Control	159
6.4.1	Equipment Economics Overview	159
6.4.2	Initial Activities	159
6.4.3	Technical Quality-Control Program	160
7.	Summary and Conclusions	162
Appendix A.	Benefit-Cost Analyses	165
A.1	Diagnostic Procedures	165
A.2	Therapeutic Procedures	166
A.2.1	Percutaneous Coronary Intervention	166
A.2.2	Uterine Fibroid Embolization	167
A.2.3	Endovascular Aneurysm Repair	168
Appendix B.	Benefit-Risk Analysis	171
B.1	Diagnostic Procedures	171
B.2	Therapeutic Procedures	173
B.2.1	Interventions in the Central Nervous System ..	174
B.2.2	Interventions in the Heart	175
B.2.2.1	Percutaneous Coronary Interventions	175
B.2.2.2	Electrophysiology Procedures	179
B.2.3	Interventions in the Abdomen and Pelvis	183
B.2.3.1	Uterine Fibroid Embolization	183
B.2.3.2	Endovascular Aneurysm Repair	184
B.2.4	Pediatric Interventional Radiology	185
B.2.4.1	Central Venous Access	185
B.2.4.2	Angiography and Vascular Intervention	186
B.2.4.3	Treatment of Vascular Anomalies ...	186
B.2.4.4	Biopsies and Drainages	186
B.2.4.5	Gastrointestinal Intervention	187

Appendix C. Medical Risks to Interventionalists and Staff	188
Appendix D. Physics and Dosimetry	190
D.1 Dosimetry Technology	190
D.2 Fluoroscopic Radiation Beams	198
Appendix E. Lens of the Eye	202
E.1 Lens of the Eye Anatomy and Pathology	202
E.2 Epidemiology of Radiation Effects on the Lens of the Eye	203
E.3 Protocol for a Slit-Lamp Examination	204
Appendix F. Tissue Reactions: Skin and Hair	206
F.1 Biological Factors Influencing Skin Reactions	206
F.2 Biology of Radiation Injuries	207
F.3 Initiating Dose and Subsequent Time Course of Radiation Injury	209
F.3.1 Prompt Reactions (less than two weeks)	210
F.3.2 Early Reactions (two to eight weeks)	211
F.3.3 Mid-Term Reactions (6 to 52 weeks)	215
F.3.4 Long-Term Reactions (>40 weeks)	216
Appendix G. Graded Examples of Skin Reactions to Radiation	217
Appendix H. Theory of Operation of Equipment	225
H.1 Introduction	225
H.2 Workflow	226
H.3 Main Acquisition Modes	228
H.4 Interventional Suite Layout	229
H.5 Interventional Image Chain	232
H.6 Patient Support and Image-Chain Gantry	235
H.6.1 Patient Support	235
H.6.2 Image-Chain Gantry	236
H.7 Automatic Exposure-Rate Control Devices	238
H.8 Interventional Image Processing	240
H.9 Anatomical Programming	242
H.9.1 Anatomical Program Selection: Fluorography (image recording mode)	243
H.9.2 Anatomical Program Selection: Fluoroscopy	245
Appendix I. Pediatric Equipment Considerations	246
Appendix J. Example of Information for Informed Consent for Radiation Risk	248

Appendix K. Example of Post-Procedure Patient Discharge Instructions for a Substantial Radiation Dose Level . . .	249
Appendix L. Equipment Acquisition and Testing	250
Appendix M. List of Practical Actions to Reduce Unnecessary Radiation Exposure to Patients and Staff During FGI Procedures	253
Glossary	254
Acronyms and Symbols	263
References	265
The NCRP	305
NCRP Publications	314
