Preface	iii
1. Executive Summary	1
1.1 General	1
1.2 Recommendations	3
2. Introduction	9
2.1 Purpose of Report	10
2.2 Background	10
2.2.1 History of Guidance and Regulations for Research Involving Human Subjects	12
2.2.2 Issues Specific to Research Involving Ionizing Radiation to Human Subjects	15
2.2.3 Scope of the Report	18
3. Basics of Radiobiology, Radiation Protection, and Radiation Dose	19
3.1 Basic Radiobiology	19
3.1.1 Tissue Reactions and Stochastic Effects	21
3.1.2 Linear-Nonthreshold Dose-Response Model	22
3.1.3 Radiation Effects and Risks to the Individual, Fetus, and Family Members	23
3.1.3.1 Radiation Effects to the Individual	23
3.1.3.2 Heritable Genetic Effects	29
3.1.3.3 Radiation Effects to the Fetus	29
3.1.3.4 Controlling Radiation Dose to the Nursing Infant from Radiopharmaceutical Administrations to the Mother	30
3.1.3.5 Controlling Radiation Dose to Family Members	34
3.2 Framework for Radiation Protection	35
3.2.1 Three Principles of Radiation Protection	35
3.2.2 NCRP 2018 Recommendations for Radiation Protection	36
3.3 Quantities and Units Describing Radiation Dose	37
3.3.1 Exposure	37
3.3.2 Absorbed Dose	38
3.3.3 Equivalent Dose	39
3.3.4 Effective Dose	40

3.3.5	Linear-Energy Transfer	42
3.3.6	Other Dose Quantities	42
3.3.7	Administered Activity	44
4.	Regulatory Requirements for Institutional Supervision of Research	45
4.1	U.S. Regulatory Structure for Human Research Radiation Protection	45
4.1.1	Institutional Review Board	46
4.1.2	Radiation Safety Committee and Radiation Safety Officer	47
4.2	Regulation of Radioactive Materials and Electronic Products	48
4.2.1	Regulation of Radioactive Materials	48
4.2.2	Regulation of Electronic Products	49
4.3	Investigational Drugs and Radiopharmaceuticals	49
4.3.1	Radioactive Drugs and the Radioactive Drug Research Committee	50
4.3.2	New Drug Application and Abbreviated New Drug Application	52
4.4	Investigational Devices	52
4.4.1	Investigational Device Exemptions	53
4.4.2	Clinical Investigations to Support Premarket Submissions	55
4.5	Expanded and Early Access to Investigational Drugs and Medical Devices	55
4.5.1	Expanded Access (“Compassionate Use”)	55
4.5.2	Humanitarian Device Exemption	56
4.5.3	Treatment Use of an Investigational Device ...	56
5.	Identification of Experimental Studies Utilizing Ionizing Radiation	58
5.1	Diagnostic-Imaging Modalities	60
5.1.1	Radiography	60
5.1.2	Dual-Energy X-Ray Absorptiometry	61
5.1.3	Fluoroscopy	62
5.1.4	Computed Tomography	62
5.1.5	Nuclear Medicine	63
5.1.6	Ultrasonography	64
5.1.7	Magnetic Resonance Imaging	64
5.1.8	Fusion Imaging	67
5.2	Image-Guided Interventions	68
5.3	Therapeutic Radiation: Radiation Therapy and Radionuclide Therapy	75
6.	Distinguishing Between Radiation Use for Research and Standard Patient Care	78

6.1	Imaging Examinations Indicated in Standard Patient Care	79
6.2	Imaging Examinations Required by Research Protocol ..	80
6.3	Imaging Examinations Requiring Greater Frequency by Research Protocol	81
6.4	Substitution of Imaging with Ionizing Radiation by Imaging without Ionizing Radiation	82
6.5	Image-Guided Interventions: Standard of Care versus Research	83
6.6	Radiation Therapy: Standard of Care versus Research ..	84
7.	Estimation of Radiation Dose	85
7.1	Dose Estimation for X-Ray Imaging	89
7.2	Dose Estimation for Computed Tomography	90
7.3	Dose Estimation for Image-Guided Interventions	92
7.4	Dose Estimation for Nuclear Medicine and Other Procedures Using Unsealed Radioactive Materials	94
7.5	Dose Estimation for Radiation Oncology	96
7.6	Radiation Dose in Perspective	96
8.	Estimation of Radiation Risk and Reasonableness of Radiation Use in Research	102
8.1	Terminology and Definitions Relating to Risk	102
8.1.1	Descriptors of Risk	103
8.1.2	Radiation Detriment	104
8.2	Estimating Cancer Risk from Average Organ Doses ..	106
8.3	Uncertainties in Risk Estimates	107
8.4	Factors Influencing Individual Risk of Cancer	109
8.5	Radiation Dose in Risk Estimations	110
8.5.1	Absorbed Dose	110
8.5.2	Effective Dose	111
8.5.3	Lifetime Attributable Risk Models	115
8.6	Second Primary Cancers Following Radiotherapy	116
8.7	Hereditary Effects	117
8.8	Tissue Reactions	118
8.9	Fetal Effects	123
8.10	Determining Reasonableness of Ionizing Radiation Use in Research Protocols	125
9.	Optimization of Radiation Dose	128
9.1	Dose Optimization in Projection Radiography	130
9.2	Dose Optimization in Computed Tomography	134
9.3	Dose Optimization in Fluoroscopically Guided Interventions	135
9.4	Dose Optimization in Nuclear Medicine and Fusion Imaging	136

9.5	Dose Optimization in Radiation Oncology and Radionuclide Therapy	137
10.	Ethics in Human-Studies Research	139
10.1	Basic Ethical Considerations in Human-Studies Research	139
10.2	Application of Ethics to Fundamental Principles of Radiation Protection	141
10.3	Ethics in Clinical Medicine versus Research	143
10.4	Respect for Autonomy and the Rule to Seek Informed Consent	144
10.5	The “Informed” Part of Informed Consent	144
10.6	The “Consent” Part of Informed Consent and Intentionality	145
10.7	Consent: Voluntariness and Controlling Influences ...	146
10.8	Vulnerable Populations	147
10.9	Cumulative Dose and Human-Studies Research	147
10.10	Scenarios Applying Ethical and Radiation Protection Principles to Human-Studies Research	149
11.	Informed Consent	151
11.1	Clear Language	152
11.2	Addressing Literacy and Numeracy	155
11.3	Keeping the Length of the Consent Document Reasonable and Commensurate with Radiation and Overall Protocol Risk	157
11.4	Communicating Risk, Uncertainty and Latency in Research Involving Radiation	159
11.5	Benchmarks and Circularity in Communicating Information on Radiation Dose	162
11.6	Studies Involving Children and Other Vulnerable Populations	163
11.7	Informed Consent for Studies Involving Diagnostic Examinations	166
11.8	Informed Consent for Studies Involving Image-Guided Interventions	167
11.9	Informed Consent for Studies Involving Therapeutic Radiation	168
12.	Summary and Conclusions	170
12.1	Regulatory Requirements	170
12.2	Radiobiology and Radiation Protection	171
12.3	Estimating Radiation Dose	172
12.4	Estimating Radiation Risk	172
12.5	Research Use of Radiation	173
12.6	Ethical Framework and Informed Consent for the Research Use of Radiation	174

Appendix A. Examples of Language for Informed Consent for Human-Studies Research Involving Ionizing Radiation Based on Radiation Exposure	177
A.1 Studies Involving Radiation from Diagnostic Examinations: Adults	180
A.1.1 Minimal to Minor Dose: $E < 3$ mSv	180
A.1.2 Minor to Low Dose: E Between 3 and 50 mSv	181
A.1.3 Low Dose: E Between 50 and 100 mSv	182
A.2 Studies Involving Radiation from Diagnostic Examinations: Children [all ages (under 18 y) and mixed ages]	182
A.2.1 Minimal to Minor Dose: $E < 3$ mSv	182
A.2.2 Minor to Low Dose: E Between 3 and 50 mSv	183
A.2.3 Low Dose: E Between 50 and 100 mSv	183
A.3 Studies Involving Radiation from Image-Guided Interventions	184
A.4 Studies Involving High-Dose Therapeutic Radiation: External-Beam, Brachytherapy, and Radionuclide Therapy	185
Appendix B. Generation of Dose Estimates for Computed Tomography	188
Abbreviations, Acronyms and Symbols	190
Glossary	192
References	203
Scientific Committee	242
The NCRP	248
NCRP Publications	259
