

Contents

Preface	iii
1. Executive Summary	1
2. Introduction	5
2.1 Purpose and Scope of this Report	5
2.2 Intended Audience	6
3. Updated NCRP Recommendations on Dose Control	7
3.1 Numeric Protection Criteria	7
3.2 Optimization of Protection (ALARA)	7
3.3 Negligible Individual Dose	12
3.4 Exposure to Members of the Public from Facility Operations	13
3.5 Exposure to Nonhuman Biota	14
3.6 Impact of Report No. 180 on Operational Safety Programs	14
4. Radiation Safety Program Roles and Responsibilities ..	16
4.1 Senior Management	16
4.1.1 Safety Culture	17
4.1.2 Safety Management System	18
4.2 Radiation Safety Officer and Staff	20
4.2.1 Radiation Safety Program Procedures	22
4.2.2 The Regulatory Environment	23
4.3 Radiation Safety Committee	24
4.4 Supervisors and Managers	25
4.5 Radiation Workers	25
4.6 Occupational Medicine	26
4.7 Legal Support	26
5. Facility and System Design Considerations	27
5.1 Selection of Locations for New or Modified Facilities ..	27
5.2 Facility Layout	28
5.3 Equipment and System Design	29
5.4 Shielding	30
5.5 Ventilation	31
5.6 Decontamination Considerations	33
5.7 Electrical Design for Instrumentation, Access Control, and Alarm Systems	33

6.	Radiological Work Controls	35
6.1	Hierarchy of Controls	35
6.2	Planning Radiological Work	35
6.2.1	Work Scope and Hazard Identification	36
6.2.2	Dose Management	37
6.2.2.1	Administrative Dose Guidelines	37
6.2.2.2	Investigation Levels	37
6.2.3	Safety Procedures and Radiation Work Permits	38
6.2.4	Work Authorization	42
6.2.5	Prejob Briefings	42
6.3	Radiation Safety Training	43
6.3.1	Personnel to be Trained	44
6.3.1.1	Radiation Workers	44
6.3.1.2	Declared Pregnant Workers	45
6.3.1.3	Packaging and Shipping Personnel	45
6.3.1.4	General Employees	45
6.3.1.5	Contractor Personnel	45
6.3.1.6	Minors	46
6.3.1.7	Management and Supervisory Personnel	46
6.3.1.8	Emergency Response Personnel	46
6.3.1.9	Visitors	46
6.3.2	Design and Development of a Radiation Safety Training Program	47
6.3.3	Delivery of Radiation Safety Training	48
6.3.4	Periodic Refresher Training	48
6.4	Interlocks and Access Control Systems	49
6.5	Posting and Labeling	52
6.5.1	Posting of Areas	52
6.5.2	Labeling of Items	53
6.6	Radioactive Material Operations	54
6.6.1	Management of Radioactive Material	54
6.6.2	Management of Sealed Radioactive Sources	56
6.6.3	Dispersible Radioactive Material Controls	58
6.6.3.1	Engineered Controls	59
6.6.3.2	Bench Top Operations	60
6.6.3.3	Chemical Fume Hoods	60
6.6.3.4	Gloveboxes	61
6.6.3.5	Workplace Selection Criteria	62
6.6.4	Contamination Control	62
6.7	Radiation Generating Device Operations	63
6.7.1	Types of RGDs	63
6.7.1.1	Cabinet-Type RGDs	64
6.7.1.2	Open-Beam Diffraction-Type RGDs	65
6.7.1.3	Accelerators	66

	6.7.1.4	Portable RGDs	66
	6.7.1.5	Medical RGDs	67
6.7.2		Management of RGDs	67
	6.7.2.1	RGD Acquisition	67
	6.7.2.2	RGD Inventory	67
	6.7.2.3	Periodic Surveys and Tests	68
	6.7.2.4	Operating Procedures	68
	6.7.2.5	Use Logs	69
	6.7.2.6	Relocating, Storing, and Disposing of RGDs	69
6.7.3		RGD Workplaces	69
6.8		Personal Protective Equipment	70
	6.8.1	General Considerations	70
	6.8.2	Protective Clothing for External Radiation Control	71
	6.8.3	Protective Clothing for Contamination Control ..	72
	6.8.4	Respiratory Protection	73
	6.8.4.1	Medical Evaluation	73
	6.8.4.2	Respirator Selection	73
	6.8.4.3	User Training	74
	6.8.4.4	Fit Testing	74
	6.8.4.5	Maintenance and Cleaning	74
	6.8.4.6	Air Sampling	74
6.9		Radiological Monitoring and Surveillance	76
	6.9.1	Purpose of Radiological Monitoring and Surveillance	76
	6.9.2	Frequency of Radiological Monitoring and Surveillance	76
	6.9.3	Contamination Monitoring of People and Equipment	77
	6.9.4	Area Monitoring for External Radiation Exposure	78
	6.9.5	Assessing Airborne Radioactivity	79
	6.9.6	Survey Directions and Documentation	82
6.10		Responding to Elevated Survey and Monitoring Results ..	83
6.11		Management of Contaminated and Activated Items and Equipment	84
6.12		Security Program for Radioactive Material and Radiation Generating Devices	85
7.		Radioactive Waste Management	89
	7.1	Minimizing the Production of Radioactive Waste	89
	7.2	Collecting, Packaging and Volume Reduction	92
	7.3	Storage of Waste	93
	7.4	Shipment and Disposal	93

8. Radiological Instrumentation	96
8.1 Field Instrumentation	96
8.1.1 Instrument Specifications	96
8.1.2 Selection of Instruments for Various Applications	98
8.1.2.1 Instruments for Photon and Beta Radiation Surveys	99
8.1.2.2 Instruments for Contamination Surveys for Alpha and Beta Radiation	100
8.1.2.3 Instruments for Neutron Radiation Surveys	101
8.1.2.4 Stationary Radiation Detectors	102
8.1.2.5 Passive Radiation Detectors	102
8.1.2.6 Instruments for Detecting Airborne Radioactivity	103
8.1.2.7 Instruments for Monitoring Radioactivity in Liquid Effluents	103
8.1.3 Instrument Calibration	104
8.1.4 Instrument Maintenance	106
8.1.5 Use of Instruments and Acceptable Uncertainty	107
8.2 Counting and Analytical Laboratories	109
8.2.1 Liquid Scintillation Counters	109
8.2.2 Alpha-Beta Particle Counters	112
8.2.3 Gamma Ray Spectrometers	114
8.2.4 Alpha Particle Spectrometers	120
9. Personnel Dosimetry	121
9.1 External Dosimetry	121
9.1.1 Criteria for Providing Dosimeters to Workers	123
9.1.2 Use of Electronic Dosimeters	123
9.1.3 Accreditation Programs (NVLAP, DOELAP)	124
9.1.4 Area Monitoring Dosimeter Programs	124
9.1.5 Nuclear Accident Dosimeters for Workers and Areas	125
9.1.6 External Dose Assessments	125
9.2 Internal Dosimetry	125
9.2.1 Direct (<i>in vivo</i>) Monitoring	126
9.2.2 Indirect (bioassay) Monitoring	127
9.2.3 Bioassay Program Criteria	128
9.2.4 Accreditation Programs (DOELAP)	129
9.2.5 Internal Dose Assessment	129
10. Control of Exposure to Members of the Public	132
10.1 Determining the Need for Surveillance	132

10.2	Radiological Effluent Monitoring and Environmental Surveillance	134
10.2.1	Monitoring Radioactive Airborne Effluents	134
10.2.2	Monitoring Liquid Effluents	136
10.2.3	Solid Waste Effluents	137
10.3	Environmental Surveillance	138
10.3.1	Preoperational Monitoring	138
10.3.2	Operational Monitoring	139
10.4	Measurement Methods	141
10.5	Dose Assessment	141
10.6	Reporting	143
11.	Response to Spills and Emergencies	144
11.1	Spill Response	144
11.1.1	Minor Radioactive Material Spills	145
11.1.2	Major Radioactive Material Spills	146
11.2	Radiation Incidents and Emergencies: Planning and Preparedness	147
11.2.1	Prospective Classification of Potential Emergencies	148
11.2.2	Development of the Emergency Plan	149
11.2.3	Development of EIPs	152
11.2.4	Evaluation of the Emergency Plan (drills and exercises)	154
11.3	Investigation of Radiological Incidents	155
12.	Quality Assurance	157
12.1	Measurement Quality	157
12.2	Assessment of Radiation Safety Program Performance	158
12.2.1	Performance-Based Self Assessment	159
12.2.2	Risk-Based Self Assessment	159
12.2.3	Compliance-Based Self Assessment	160
12.2.4	External Assessments	161
12.3	Corrective Action Identification and Tracking	161
13.	Records	163
13.1	Radiation Safety Manual, Policies and Procedures	164
13.2	Dosimetry Records	164
13.3	Radiological Surveillance Program Records	166
13.4	Environmental Monitoring Records	166
13.5	Radiation Safety Instrument Program Records	167
13.6	Radioactive Materials and Waste Disposal Records	168
13.7	Other Records	168
Appendix A. Suggested Topics for Radiation Safety Training (NCRP 2000b)		170

Appendix B. Example of the Use of the HotSpot Code for	
Workplace Selection	173
B.1 Toxicity Factor	174
B.2 Use Factor	174
B.3 Example of Using Radionuclides in the Workplace	175
Appendix C. Supplemental Information Specific to Different	
Operational Settings	177
C.1 Medical Facilities	177
C.1.1 Radioactive Material Licensing and Use	178
C.1.2 Medical Events	179
C.1.3 Comforters and Caregivers	180
C.1.4 Institutional Review Board	180
C.1.5 Guidance for Specific Applications of Medical	
Radiation Protection	181
C.1.6 Overview of Radiation Safety Concerns in	
Medical Practice	181
C.1.6.1 Fluoroscopy Guided Interventional	
Procedures	181
C.1.6.2 Positron Emission Tomography	186
C.1.6.3 Radiopharmaceutical Therapy	187
C.2 University-Type Research Facilities	189
C.2.1 Organization and Administration of the	
Radiation Safety Program	189
C.2.2 Facility and System Design Considerations	190
C.2.3 Work Planning, Audits, and Training	191
C.2.4 Emergency Planning	192
C.2.5 Decommissioning	192
C.3 Biotechnology Facilities	193
C.3.1 Principal Radiological Hazards	193
C.3.2 Facility Design Requirements	194
C.3.3 Radioactive Waste Handling and Disposal	195
C.4 National Laboratories	195
C.4.1 Radioactive Material and RGD Use	195
C.4.2 Administration of the Radiation Safety	
Program	196
C.4.3 Principal Radiological Hazards and Facility	
Design Considerations	196
C.4.4 Radiological Monitoring Equipment	197
C.4.5 Internal and External Dosimetry	197
C.4.6 Radiological Training	198
C.4.7 Effluent Monitoring and Radioactive Waste	
Handling	198
C.5 Commercial Nuclear Power Reactors	198
C.5.1 Radiation Safety Program	200

	C.5.2	Facility Design	201
	C.5.3	Radioactive Material and Controls	201
	C.5.4	Work Planning	202
	C.5.5	Training	202
	C.5.6	Personnel Monitoring	203
	C.5.7	Posting and Labeling	203
	C.5.8	ALARA	204
C.6		Nuclear Gauging Devices	205
	C.6.1	Radiological Hazards	207
	C.6.2	Radiation Safety Program	207
	C.6.3	Facility Design	208
	C.6.4	Radiation Monitoring Equipment	208
	C.6.5	Physical Security Monitoring and Surveillance	208
	C.6.6	Dosimetry	209
	C.6.7	Training	209
	C.6.8	Radioactive Waste Handling and Disposal	209
C.7		Industrial Radiography	209
	C.7.1	Radiographic Sources	210
	C.7.2	Hazards	211
	C.7.3	Radiation Safety Controls	212
	C.7.4	Equipment	212
	C.7.5	Training	212
	C.7.6	RSO Duties	213
	C.7.7	Operating and Emergency Procedures	213
	C.7.8	Personnel Monitoring	214
	C.7.9	Surveys	214
	C.7.10	Physical Security of Radiographic Sources in Portable Devices	214
C.8		Irradiator Facilities Utilizing Sealed Radioactive Sources	215
	C.8.1	Facility Design	216
	C.8.2	Monitoring Requirements	216
	C.8.3	Access Controls	217
	C.8.4	Security Monitoring and Surveillance	217
	C.8.5	Dosimetry	217
	C.8.6	Training	217
	C.8.7	Effluent Monitoring	217
	C.8.8	Radioactive Waste Handling and Disposal	217
C.9		Large Accelerator Facilities	218
	C.9.1	Types of Accelerators and Types of Radiation Produced	218
	C.9.2	Specialized Categories of Large Research Facilities	219
	C.9.3	Types of Radioactive Materials Present	220
	C.9.4	Principal Radiological Hazards	221

C.9.5	Facility Design Considerations	222
C.9.6	Radiation Monitoring	222
C.9.7	Training	223
C.9.8	Effluent Monitoring and Radioactive Waste Management	223
C.10	Oil and Gas Industry	224
C.11	Decommissioning and Cleanup Sites	226
C.11.1	Regulatory Guidance and Cleanup Criteria ...	227
C.11.2	Types of Cleanup Sites	228
C.11.3	Phases of Decommissioning	228
C.11.4	Facility HSA and Characterization Surveys ...	228
C.11.5	Work Control	229
C.11.6	Background Reference Areas and Instrumentation	229
C.11.7	Remedial Action Survey Support	230
C.11.8	Waste Management	230
	Abbreviations, Acronyms and Symbols	233
	Glossary	235
	References	242
	Scientific Committee	261
	The NCRP	269
	NCRP Publications	280
