Contents

Preface ................................................................. iii

Executive Summary .................................................. 1

1. Introduction .......................................................... 3
  1.1 Purpose ............................................................. 3
  1.2 Background: Response to Radiological and Nuclear Emergencies ..... 3
    1.2.1 Radiological Emergency versus Nuclear Detonation ................. 4
    1.2.2 Dosimetry for Regulatory Compliance versus Emergency Response:
          The Need for a New Paradigm ........................................ 4

2. Operational Use of Previous NCRP Recommendations ....................... 7
  2.1 Key Principles ..................................................... 7
  2.2 Operational Use of NCRP Report No. 179 Recommendations:
          Responder Safety and Dosimetry ...................................... 8
          2.2.1 Radiological Responses ........................................ 8
            2.2.1.1 Dosimetry in the Early Phase of the Response ............ 8
            2.2.1.2 Dose Accrued During the Emergency ..................... 9
            2.2.1.3 Communication ........................................... 9
            2.2.4 OSHA Regulations ............................................ 15
            2.2.5 Optimizing Radiation Measurement Equipment ............ 15
          2.2.2 Nuclear Detonation Responses .................................. 16
            2.2.2.1 Communication ........................................... 18
            2.2.2.2 Protective Action Recommendations ..................... 19
          2.2.3 Explosive Radiological Dispersal Device Responses ........... 20
          2.3 Emergency Worker Risk Comparison ................................ 22

3. Management of Dose Within the Incident Command System ................. 24
  3.1 Procedure for Implementing Dose Control and Monitoring in an Incident
      Command System Organization ....................................... 24
  3.2 Resource Management, Incident Objectives, and Priorities ............ 24
  3.3 Dose Tracking and Recording Using the Incident Command System .... 26
  3.4 Responder Accountability for Radiation Dose Management ............ 26
  3.5 Dose Monitoring Recordkeeping ..................................... 28

4. Dose Reconstruction and Records Management ................................ 30
  4.1 Using Responder Accountability for Dose Reconstruction ............. 30
  4.2 Using Incident Command System Forms to Capture Data Essential for Dose
      Reconstruction ...................................................... 31
  4.3 Records Management for Long-Term Follow-Up ........................ 32

5. Questions and Answers on Emergency Worker Dosimetry ................... 33
Appendix A. Units Conversion Table ......................................................... 38
Appendix B. Dose Monitoring Considerations During Planning ................. 39
Appendix C. Dosimetry Considerations for Urban Search and Rescue Service Dogs During Radiological Incidents ................................................. 44
Appendix D. Use of Standard Incident Command System Forms to Capture Dosimetry During a Radiological/Nuclear Incident ......................... 46
Abbreviations and Acronyms ................................................................. 58
Glossary ............................................................................................... 59
References ............................................................................................ 63
Scientific Committee Members .............................................................. 65
The NCRP ............................................................................................. 71
NCRP Publications .............................................................................. 80
