Preface	iii
1. Executive Summary	1
1.1 Introduction	1
1.2 Study Reviews	1
1.2.1 Life Span Study	2
1.2.2 Worker Studies	2
1.2.3 Environmental Exposure Studies	4
1.2.4 High Background Radiation Area Studies	4
1.2.5 Childhood and Adolescent Radiation Studies	5
1.2.6 Diseases Classified as Tissue Reactions	5
1.3 Results of Study Evaluations	6
1.4 Future Improvements	6
1.5 Summary	8
1.6 Overall Conclusions on the Use of the Linear-Nonthreshold Model	9
2. Introduction	10
2.1 Background	10
2.2 Linear Nonthreshold and the Estimation of Cancer Risk	11
2.3 Objective and Scope	12
3. Important Considerations	14
3.1 Epidemiologic Considerations	14
3.2 Dosimetry Considerations	16
3.3 Statistical Considerations	17
3.4 Dose-Response Considerations	19
3.4.1 Dose Response and Solid Cancers: Cancer Type and Sensitivity	19
3.4.2 Dose Response and Leukemia	20
3.4.3 DDREF Considerations	21
4. Review of Epidemiologic Studies of Cancer and Genetic Effects from Low Dose or Low Dose-Rate Irradiation	22
4.1 Japanese Atomic-Bomb Survivors	43
4.1.1 Dosimetry Considerations	43
4.1.2 Epidemiologic Methods and Uncertainties	45
4.1.3 Statistical Results	45
4.1.4 Study Strengths and Weaknesses	48
4.1.5 Implications for the LNT Model and Radiation Protection	49
4.2 Worker Exposure Studies	49
4.2.1 15-Country Study	50
4.2.1.1 Dosimetry	50
4.2.1.2 Epidemiologic Methods, Findings and Issues	51
4.2.1.3 Study Strengths and Weaknesses	52
4.2.1.4 Implications for the LNT Model and Radiation Protection ...	52

4.2.2	INWORKS	52
	4.2.2.1 Dosimetry	53
	4.2.2.2 Epidemiologic Methods, Findings and Issues	55
	4.2.2.3 Study Strengths and Weaknesses	60
	4.2.2.4 Implications for the LNT Model and Radiation Protection ...	61
4.2.3	Mayak Worker Study	61
	4.2.3.1 Dosimetry	62
	4.2.3.2 Epidemiologic Methods, Findings and Issues	63
	4.2.3.3 Study Strengths and Weaknesses	65
	4.2.3.4 Implications for the LNT Model and Radiation Protection ...	66
4.2.4	Japanese Worker Study	66
	4.2.4.1 Dosimetry	66
	4.2.4.2 Epidemiologic Methods, Findings and Issues	66
	4.2.4.3 Study Strengths and Weaknesses	67
	4.2.4.4 Implications for the LNT Model and Radiation Protection ...	67
4.2.5	Chernobyl Cleanup Worker Studies	67
	4.2.5.1 Dosimetry	67
	4.2.5.2 Epidemiologic Methods, Findings and Issues	68
	4.2.5.3 Study Strengths and Weaknesses	68
	4.2.5.4 Implications for the LNT Model and Radiation Protection ...	68
4.2.6	U.S. Radiologic Technologists Study	69
	4.2.6.1 Dosimetry	69
	4.2.6.2 Epidemiologic Methods, Findings and Issues	69
	4.2.6.3 Study Strengths and Weaknesses	70
	4.2.6.4 Implications for the LNT Model and Radiation Protection ...	70
4.2.7	Million Person Study of Low Dose Radiation Health Effects	70
	4.2.7.1 Introduction	70
	4.2.7.2 Dosimetry	71
	4.2.7.3 Epidemiologic Methods, Findings and Issues	72
	4.2.7.4 Study Strengths and Weaknesses	75
	4.2.7.5 Implications for the LNT Model and Radiation Protection ...	76
4.2.8	Canadian Nuclear Worker Study	76
	4.2.8.1 Dosimetry	76
	4.2.8.2 Epidemiologic Methods, Findings and Issues	77
	4.2.8.3 Study Strengths and Weaknesses	77
	4.2.8.4 Implications for the LNT Model and Radiation Protection ...	77
4.2.9	French Uranium Processing Workers	77
	4.2.9.1 Dosimetry	77
	4.2.9.2 Epidemiologic Methods, Findings and Issues	78
	4.2.9.3 Study Strengths and Weaknesses	78
	4.2.9.4 Implications for the LNT Model and Radiation Protection ...	78
4.2.10	Chinese Medical X-Ray Worker Study	78
	4.2.10.1 Dosimetry	78
	4.2.10.2 Epidemiologic Methods, Findings and Issues	79
	4.2.10.3 Study Strengths and Weaknesses	79
	4.2.10.4 Implications for the LNT Model and Radiation Protection ...	79
4.3	Environmental Exposure Studies	79

4.3.1	Techa River Resident Cohort	80
4.3.1.1	Dosimetry	80
4.3.1.2	Epidemiologic Methods, Findings and Issues	81
4.3.1.3	Study Strengths and Weaknesses	82
4.3.1.4	Implications for the LNT Model and Radiation Protection	83
4.3.2	Chernobyl Resident Cohorts	84
4.3.2.1	Dosimetry	84
4.3.2.2	Epidemiologic Methods, Findings and Issues	85
4.3.2.3	Study Strengths and Weaknesses	86
4.3.2.4	Implications for the LNT Model and Radiation Protection	86
4.3.3	High Background Radiation Area Studies: Kerala, India Study	86
4.3.3.1	Dosimetry	87
4.3.3.2	Epidemiologic Methods, Findings and Issues	87
4.3.3.3	Study Strengths and Weaknesses	87
4.3.3.4	Implications for the LNT Model and Radiation Protection	88
4.3.4	Yangjiang, China HBRA Study	88
4.3.4.1	Dosimetry	88
4.3.4.2	Epidemiologic Methods, Findings and Issues	89
4.3.4.3	Limitations of the Kerala and Yangjiang HBRA Studies	90
4.3.4.4	Implications of the HBRA Studies for the LNT Model and Radiation Protection	90
4.3.5	Taiwan Residents of Radiation-Contaminated Buildings	90
4.3.5.1	Dosimetry	90
4.3.5.2	Epidemiologic Methods, Findings and Issues	91
4.3.5.3	Study Strengths and Weaknesses	91
4.3.5.4	Implications for the LNT Model and Radiation Protection	91
4.3.6	Radiation Fallout Studies	92
4.3.6.1	Japanese Atomic-Bomb Fallout	92
4.3.6.2	Marshall Islands Atomic-Testing Fallout	93
4.3.6.3	NTS Atomic Fallout in Utah	93
4.3.6.4	Atomic-Testing Fallout Across the United States	93
4.3.6.5	Semipalatinsk Fallout	94
4.3.6.6	Hanford ¹³¹ I Fallout	94
4.3.6.7	Mayak Fallout	95
4.3.6.8	TMI Fallout	95
4.3.6.9	Fukushima Daiichi Fallout	96
4.4	Medical Exposure Studies	96
4.4.1	TB Fluoroscopy Studies	97
4.4.1.1	Dosimetry	97
4.4.1.2	Epidemiologic Methods, Findings and Issues	98
4.4.1.3	Summary Studies of TB Patients Receiving Repeated Chest Fluoroscopies for Lung Collapse	98
4.4.1.4	Implications for the LNT Model and Radiation Protection	98
4.4.2	CT Scanning Studies	98
4.4.2.1	Dosimetry	99
4.4.2.2	Epidemiologic Methods, Findings and Issues	99
4.4.2.3	Strengths and Limitations	101
4.4.2.4	Implications for the LNT Model and Radiation Protection	102
4.5	Childhood Exposure Studies	102
4.5.1	Childhood Atomic-Bomb Survivors	103

4.5.2	Childhood Leukemia Studies	103
4.5.3	Thyroid Cancer Studies	104
4.5.3.1	Pooled Studies of Thyroid Cancer After X or Gamma Irradiation	104
4.5.3.2	Other Studies of Thyroid Cancer After Childhood Exposure	106
4.5.4	Breast Cancer Studies	106
4.6	<i>In Utero</i> Exposure Studies	107
4.6.1	Pregnancy Risks from Ionizing Radiation	108
4.6.2	<i>In Utero</i> Exposures to Occupational or Environmental Sources	108
4.6.3	<i>In Utero</i> Diagnostic Radiology	109
4.7	Genetic Studies (heritable effects in human populations)	110
4.7.1	Studies of Atomic-Bomb Survivor Offspring	110
4.7.2	Studies of Offspring After Parental Preconception Radiotherapy	111
4.7.3	Cancer in Offspring After Environmental Preconception Radiation Exposure	111
4.7.4	Implications for Radiation Protection	111
5.	Review of Epidemiologic Studies for Tissue Reactions	113
5.1	Cardiovascular Effects Studies	114
5.1.1	Higher Doses and Cardiovascular Disease	114
5.1.2	TB Fluoroscopy Studies	115
5.1.2.1	Dosimetry	115
5.1.2.2	Epidemiologic Methods, Findings and Issues	116
5.1.2.3	Study Strengths and Weaknesses	116
5.1.2.4	Implications for the LNT Model and Radiation Protection ..	116
5.1.3	Nuclear Worker Radiation Exposure and Cardiovascular Diseases ..	116
5.1.4	Environmental Radiation Exposure	121
5.1.5	Implications of Cardiovascular Disease for the LNT Model and Radiation Protection	121
5.2	Cataract Studies	123
5.3	Thyroid Noncancer Effects Studies	124
5.3.1	Atomic-Bomb Studies	124
5.3.2	Chernobyl ¹³¹ I Fallout and Noncancer Thyroid Effects	124
5.3.3	Other Studies of Radioactive Iodine Fallout and Thyroid Effects	124
5.3.4	Implications of Noncancer Thyroid Effects for Radiation Protection ..	125
6.	Study Quality	126
6.1	Strengths	126
6.2	Opportunities for Improvement	126
7.	Strength of Support for Linear-Nonthreshold in Recent Epidemiologic Studies	128
8.	Future Directions	132
8.1	Epidemiology	132
8.1.1	Atomic-Bomb Survivor Studies	132
8.1.2	Radiation Worker Studies	133
8.1.3	Environmental Radiation Studies	134
8.1.4	Computed Tomography Studies	134
8.1.5	Childhood and <i>In Utero</i> Exposures	135
8.1.6	Studies of Tissue Reactions	135

8.2	Dosimetry: Future Directions	135
8.3	Dose and Dose-Rate Effectiveness Factor: Future Directions	136
8.4	Key Events, Bioindicators, and Risk Assessment: Future Directions	137
8.5	Other Future Direction Recommendations	137
9.	Conclusions	139
9.1	Overall Conclusion on Use of the Linear Nonthreshold Model	139
9.2	Supporting Conclusions	139
9.3	Radiation Protection Implications	140
	Abbreviations, Acronyms and Symbols	141
	Glossary	143
	References	147
